

MOHD RAYYAN BIN MOHD JAWEED

Data Scientist Intern | The Ascent Group

☎ +91 8106931514 | ✉ rayyan.rbj0409@gmail.com | [in LinkedIn](#) | <> [GitHub](#) | ● [Portfolio](#)

Profile

Data Science Intern with hands-on experience designing scalable **ML pipelines** and backend systems for real-world financial data. Skilled in **feature engineering**, model **deployment**, and building API-driven ML applications using **Python** and **AWS**. Interested in developing production ready intelligent systems.

Technical Skills

Machine Learning: Supervised Learning, Model Training, Evaluation, Feature Engineering, Model Deployment

Deep Learning: PyTorch

NLP & LLMs: Transformer Models (BERT), Prompt Engineering, LLM Integration (Gemini, OpenAI)

Libraries & Frameworks: Scikit-learn, Pandas, NumPy, Polars, Hugging Face Transformers

Programming: Python, SQL

Data Visualization: Matplotlib, Seaborn, Power BI, Tableau

Cloud & MLOps: AWS (S3, EC2, SageMaker, Lambda, RDS, Glue, CloudWatch, Bedrock)

Databases: MySQL, PostgreSQL

Tools: Flask, FastAPI

Soft Skills : Stakeholder Communication | Cross-functional Collaboration

Experience

Data Scientist Intern - The Ascent Group

Feb 2026 - Present

Marathalli, Bengaluru, Karnataka, India

- Engineered high-quality training dataset pipelines for financial ML workflows, **cutting preprocessing time by ~30%** and accelerating downstream model iteration.
- **Architected** and **optimized** modular data preprocessing **pipelines**, reducing manual effort and improving **data readiness** for production ML models.
- **Validated** and reconciled **critical financial metrics** — including PnL, derivative fees, and margin interest — reducing data inconsistencies by **improving** reliability of model training inputs.
- Debugged and **re-architected** data pipeline **bottlenecks**, achieving a **~25% reduction** in **processing time** and **improving** overall workflow efficiency at scale.
- Applied **statistical modeling** and **feature engineering** techniques to detect **anomalies** in financial transaction data, **supporting fraud-risk** and compliance workflows.

CERTIFICATIONS

Complete **Data Science, Machine Learning, DL, NLP Bootcamp** ([Cert link](#))

- Udemy

EDUCATION

B.Tech in Computer Science and Technology

2022 - 2026

Jawaharlal Nehru Technological University Hyderabad

PROJECTS

1. SurgiMind - Surgical Tool Detection & AI Platform

Python · AWS · SageMaker · Computer Vision

[Github](#)

- Built a computer vision system to **detect surgical tools** and extract procedural insights from medical data, supporting OR workflow efficiency
- Deployed scalable real-time inference endpoints on **AWS SageMaker** and **Lambda**, reducing model serving latency in production
- Architected cloud-native storage using S3 and RDS to manage datasets, annotations, and inference logs at scale
- Built end-to-end ML pipeline covering **data ingestion**, **preprocessing**, and **model inference**, reducing manual intervention
- Designed and integrated REST APIs connecting low-latency inference endpoints to backend services in a live environment
- Monitored system reliability via **AWS CloudWatch**, proactively identifying bottlenecks to ensure stable production behavior

2. MoodJournal --Voice-Based Emotion Recognition System

Python · Audio ML · Google APIs · NLP

[Github](#)

- Developed a **voice-based emotion recognition pipeline** using audio feature extraction to classify user mood from speech inputs in real time
- Integrated Google APIs to deliver **personalized** activity and **music recommendations** based on detected **emotional state**
- Engineered end-to-end data flow from voice input through emotion inference to recommendation delivery, optimizing for low-latency UX
- Built real-time personalization backend linking emotion recognition outputs to adaptive content delivery for mental health awareness

3. ASD Screening & ML Prediction System

Python · Scikit-learn · Streamlit · Pandas

[Github](#)

- Trained **Random Forest model** on Q-Chat-10 behavioral data to predict **ASD** risk in toddlers aged 18–30 months
- **Preprocessed** and **cleaned** real-world **behavioral** and **demographic** dataset using Pandas, applying label encoding and feature selection for model readiness
- Evaluated models using Accuracy, Precision, Recall, F1-score, and ROC-AUC to select the best-performing classifier
- **Deployed** an interactive **Streamlit web app** accepting Q-Chat-10 inputs and returning real-time ASD risk predictions with **probability scores**
